PROFESSIONAL SUMMARY

Applied Cybersecurity MSc candidate (graduating Nov 2026) targeting SOC Analyst L1 and security / risk analyst roles, with a longer-term focus on Governance, Risk & Compliance (GRC). Hands-on experience across SIEM-based alert triage, log analysis, threat intelligence, and attack simulation using Splunk, Wazuh, Wireshark, and a self-built Cowrie honeypot lab. Completed TryHackMe Security Analyst Level 1 training covering incident investigation, phishing analysis, and escalation workflows. Comfortable in Linux environments and skilled at turning technical findings into clear reports and KPIs for stakeholders.

TECHNICAL SKILLS

Security Operations: SIEM Monitoring, Log Analysis, Alert Triage, Threat Detection, Incident Investigation, Escalation Workflows, Honeypots, Attack Simulation, MITRE ATT&CK (basics)

Tools & Platforms: Splunk, Wazuh, Wireshark, Cowrie, Snort, Prometheus, Linux, VirtualBox, VMware, Git, Power BI

Investigation: SSH Brute-Force Detection, Malware Download Analysis, Suspicious Command Review, IOC Identification

Networking: TCP/IP, DNS, HTTP, Firewalls, IDS/IPS

Programming & Scripting: Python, Bash, SQL, Java, C

PROJECTS

Interactive Threat Intelligence Honeypot & Attack Simulation Lab

Mar 2026 – Apr 2026

- Deployed and configured a Cowrie SSH honeypot in a virtualised Linux environment to capture and study real-world attacker behaviour.
- Simulated and analysed SSH brute-force attacks, credential harvesting, post-exploitation activity, automated bot attacks, and malware download attempts.
- Analysed the captured session, extracting attacker commands, intrusion patterns, and IOCs to classify malicious intent and common attack behaviour.

SOC Alert Triage Lab — TryHackMe

Current

- Investigated security events in Splunk using SPL queries to filter events, review timestamps, and identify source IPs during initial triage.
- Triage alerts for brute-force attempts, suspicious logins, phishing indicators, and malware activity, following SOC-style steps to classify alerts and determine whether escalation was required.

CERTIFICATIONS & TRAINING

- **TryHackMe — Security Analyst Level 1 (SAL1) training** — SIEM monitoring, Splunk alert triage, log investigation, phishing analysis, endpoint monitoring, incident escalation.
- **Samsung Innovation Campus 2025** — Artificial Intelligence.
- **IBM SkillsBuild** — Cybersecurity Fundamentals.
- **CompTIA Security+** — Training in progress
- **ISO 27001:2022 LA**

PROFESSIONAL EXPERIENCE

Data Analyst Intern | Lucy Switchgear FZE — JAFZA, Dubai, UAE

Aug 2024 – Jan 2025

- Built a unified Power BI dashboard tracking machine breakdowns and reliability KPIs (MTTR, MTBR), giving maintenance teams real-time visibility for reporting and decision-making.
- Developed macro-based user forms that reduced manual data-entry time and improved operational efficiency.
- Supported maintenance data processes and tracked Hazard Identification and Tracking (HIT) tickets through to closure.

Sales Intern | TLS IT Solutions — JLT, Dubai, UAE

Jun 2023 – Aug 2023

- Used targeted questioning to determine customer needs and recommend appropriate IT support solutions.
- Handled inbound customer calls, resolving queries professionally and within target timelines.
- Consistently met daily performance targets, supporting departmental sales goals.

EDUCATION

MSc Applied Cybersecurity — Heriot-Watt University, Dubai, UAE

Sep 2025 – Nov 2026 (expected)

BEng Computer Science — BITS Pilani, Dubai, UAE

Sep 2021 – Jun 2025

LANGUAGES

English (fluent), Tamil, Hindi
